

Solutions for Enterprise-Wide Procurement: SEWP IV

The Solutions for Enterprise-Wide Procurement (SEWP) IV contract is one of the Federal government's most comprehensive vehicles, providing all agencies access to purchase commercially available information technology products and services. GTSI delivers advanced, IT hardware and software at pre-negotiated rates, along with accompanying professional and financial services through this Government-Wide Acquisition Contract (GWAC).

Agencies may procure enterprise technology systems, network equipment, and computing devices with application software to fulfill requirements for physical and cyber security, mobility, information sharing, storage management, and server consolidation. Along with these advanced tools, agencies have access to GTSI's subject matter experts – system architects, certified engineers, and project managers, who design, integrate, implement, test, maintain, and support technology solutions throughout their lifecycles.

As a single source for IT products and services, GTSI helps agencies transform technology components into comprehensive infrastructure solutions to support the demands of today's government, while continually anticipating future needs and growth. Agencies are able to accelerate

modernization, meet OMB mandates, and realize value through this single source in the form of cost and resource savings through GTSI's SEWP IV program.

Technology Infrastructure Solutions

GTSI works closely with agencies and departments to understand business and technology goals. Using a Technology Lifecycle Management (TLM) approach, GTSI experts can help identify infrastructure gaps, requirements, and growth potential. They turn this knowledge and evaluation into action by bringing components and services together for turnkey solutions in areas such as:

- Server and Storage Consolidation
- Networking
- Unified Communications
- IT Healthcare
- Asset Management

TLM is a proactive, multi-phased method to plan, design, acquire, implement, and manage all elements of the IT infrastructure. It allows agencies to develop long-term strategies that leverage resources, anticipate future requirements, and focus on overall business goals. It also provides Infrastructure as a Service (IaaS) within a single comprehensive, executable plan.

Leveraging Technology with a Comprehensive Suite of Services

Careful planning and project management, along with proven processes, enable GTSI to complete agencies' IT projects on time, within scope, and on budget. And by accessing the range of GTSI's services available under SEWP IV, agencies can enhance their infrastructure performance and realize the full benefit of their investments.

These services include:

- Management Consulting
- Program Management
- Project Management
- Financial Services
- E-Business
- Support Services
- Integration Services and Asset Management
- Enterprise Education
- Staff Augmentation
- Enterprise Software Licensing and Deployment

GTSI offers comprehensive professional and financial services for turnkey IT infrastructure solutions. GTSI's certified engineers and project managers, with over 1,000 certifications, support agencies in these technology areas:

- Networking
- Storage and Servers
- Physical Security
- Cyber Security
- Enterprise Software

GTSI offers several financing options that allow agencies to acquire technology products and services as they are needed and pay over time.

Contract Details

- NASA administered GWAC for all Federal agencies
- Contract #: NNG07DA49B
- Period: May 1, 2007 – April 30, 2014
- Product types: all technology categories
- One of the lowest fees; \$10,000 maximum surcharge
- Shipping and handling: shipping charges may apply; expedited delivery available
- Quick, simple product ordering via GTSI.com/SEWP4 at pre-competited, pre-negotiated prices
- Associated professional and financial services available

GTSI Corp. is the first information technology solutions provider offering a Technology Lifecycle Management (TLM) approach to IT infrastructure solutions delivered through industry-leading professional and financial services. GTSI employs a proactive, strategic methodology that streamlines technology lifecycle management, from initial assessment to acquisition, implementation, refresh, and disposal. TLM allows government agencies to implement solutions of national and local significance quickly and cost-effectively. GTSI's certified engineers and project managers leverage strategic partnerships with technology innovators. These experts use proven, repeatable processes to design, deploy, manage, and support simple to complex solutions, to meet governments' current and future requirements and business objectives. GTSI is headquartered in Northern Virginia, outside of Washington, D.C.
